

Connecting observations and scenarios

*Zesspiegelmonitor
workshop 16/04/2026*

*Dewi Le Bars researcher
at KNMI*

From observations to scenarios

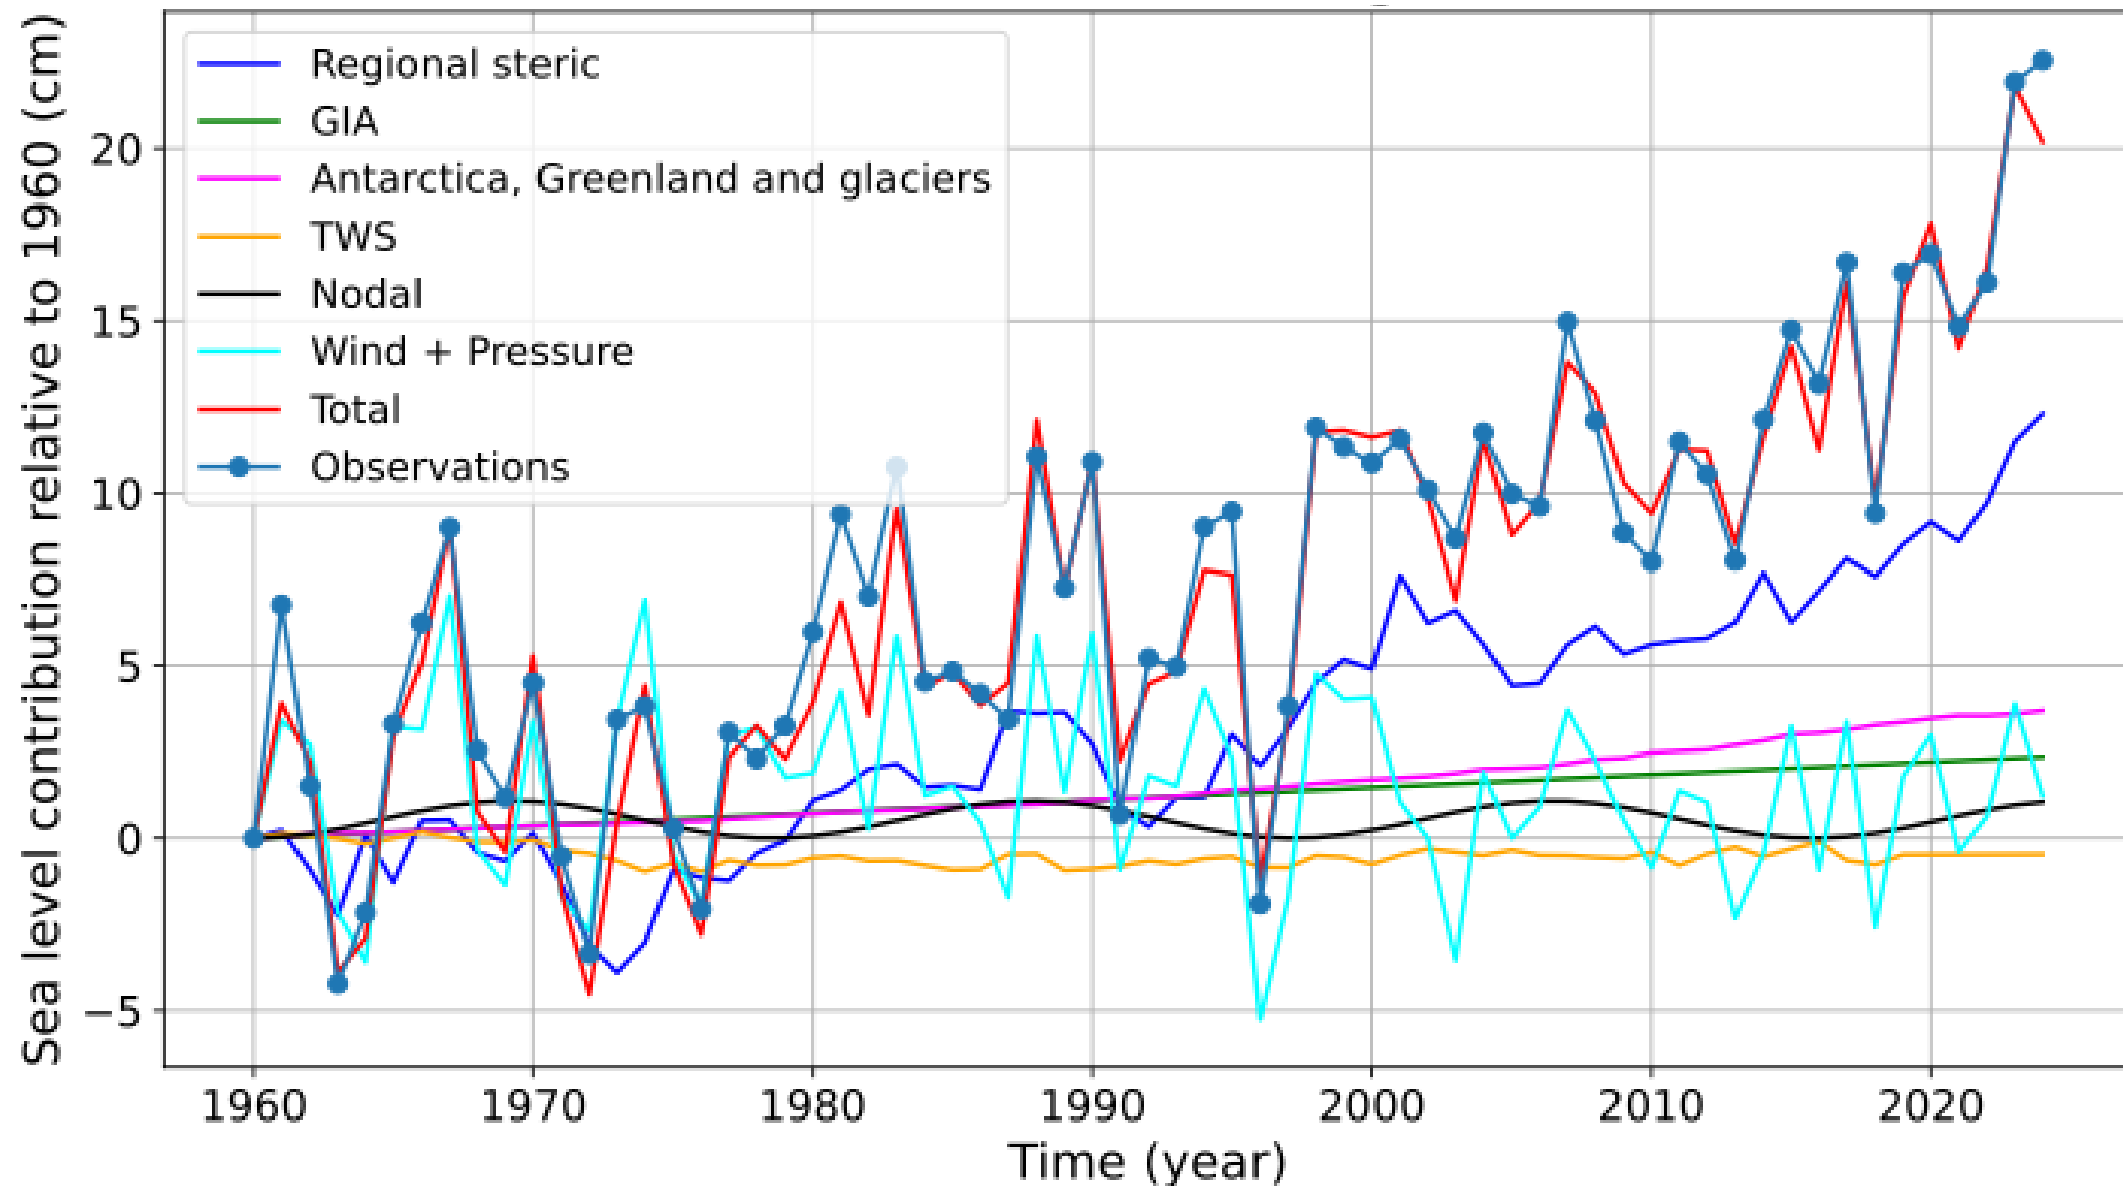

SCENARIOS

Based on observations, IPCC AR6 findings, analysis of CMIP6 model data and more recent studies

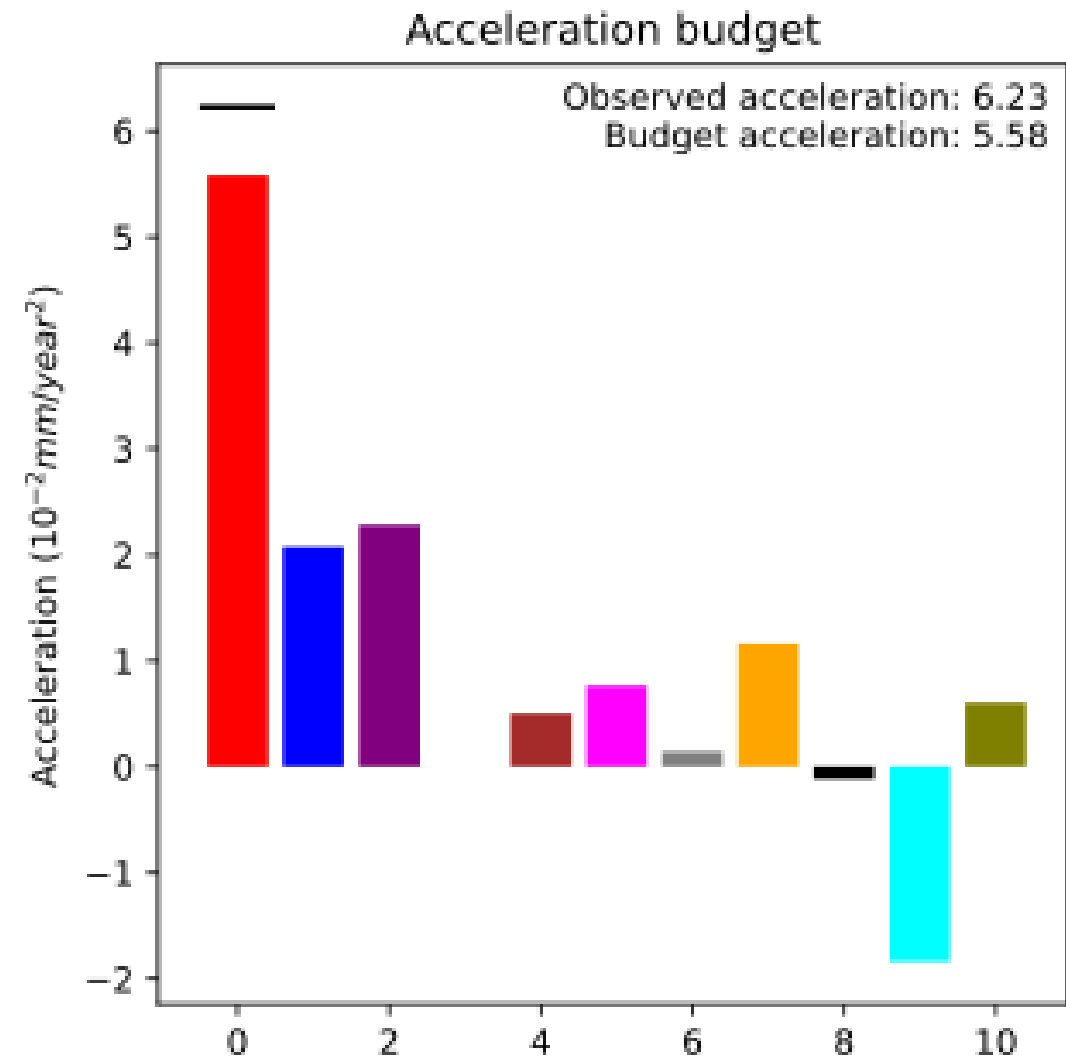

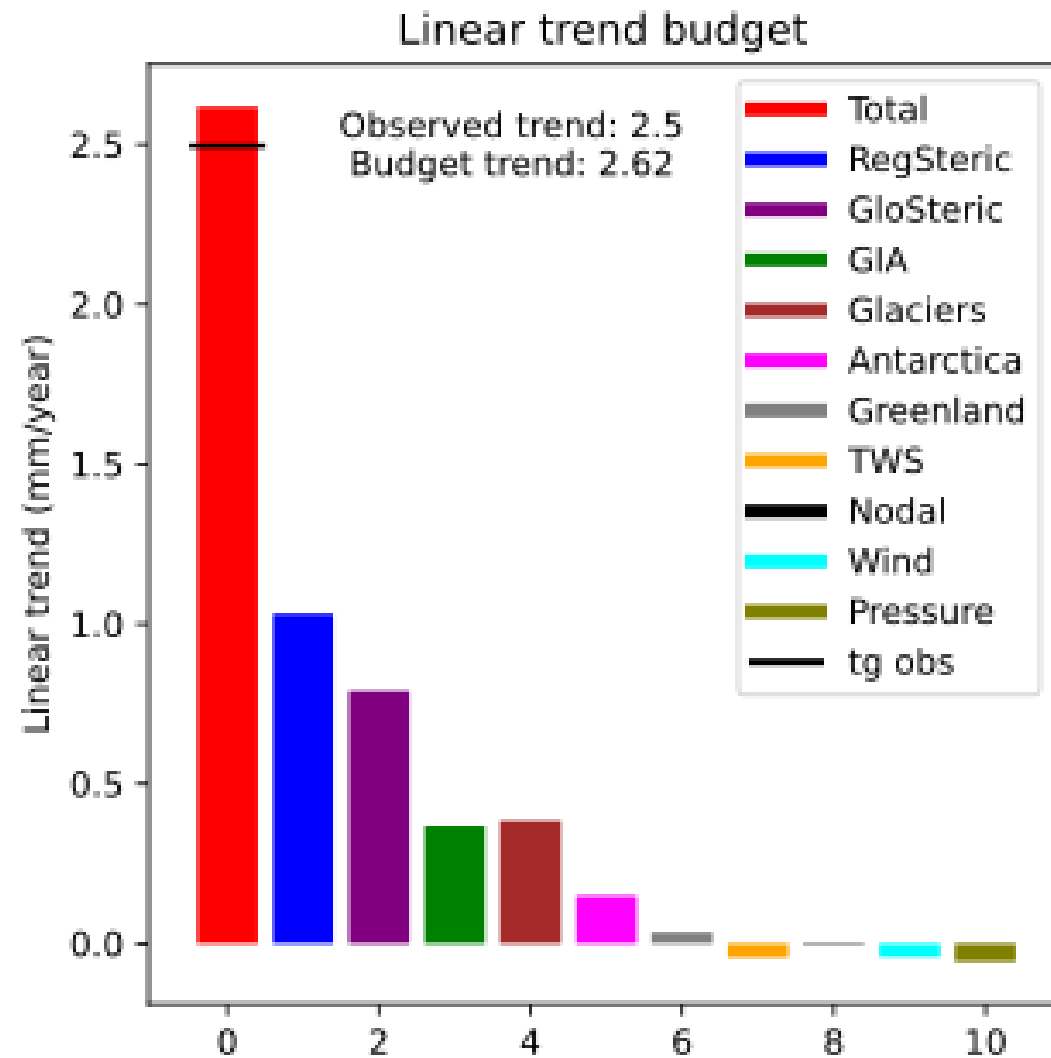

Le Bars and Drijfhout
(Earth's Future, 2025)

Sea level budget

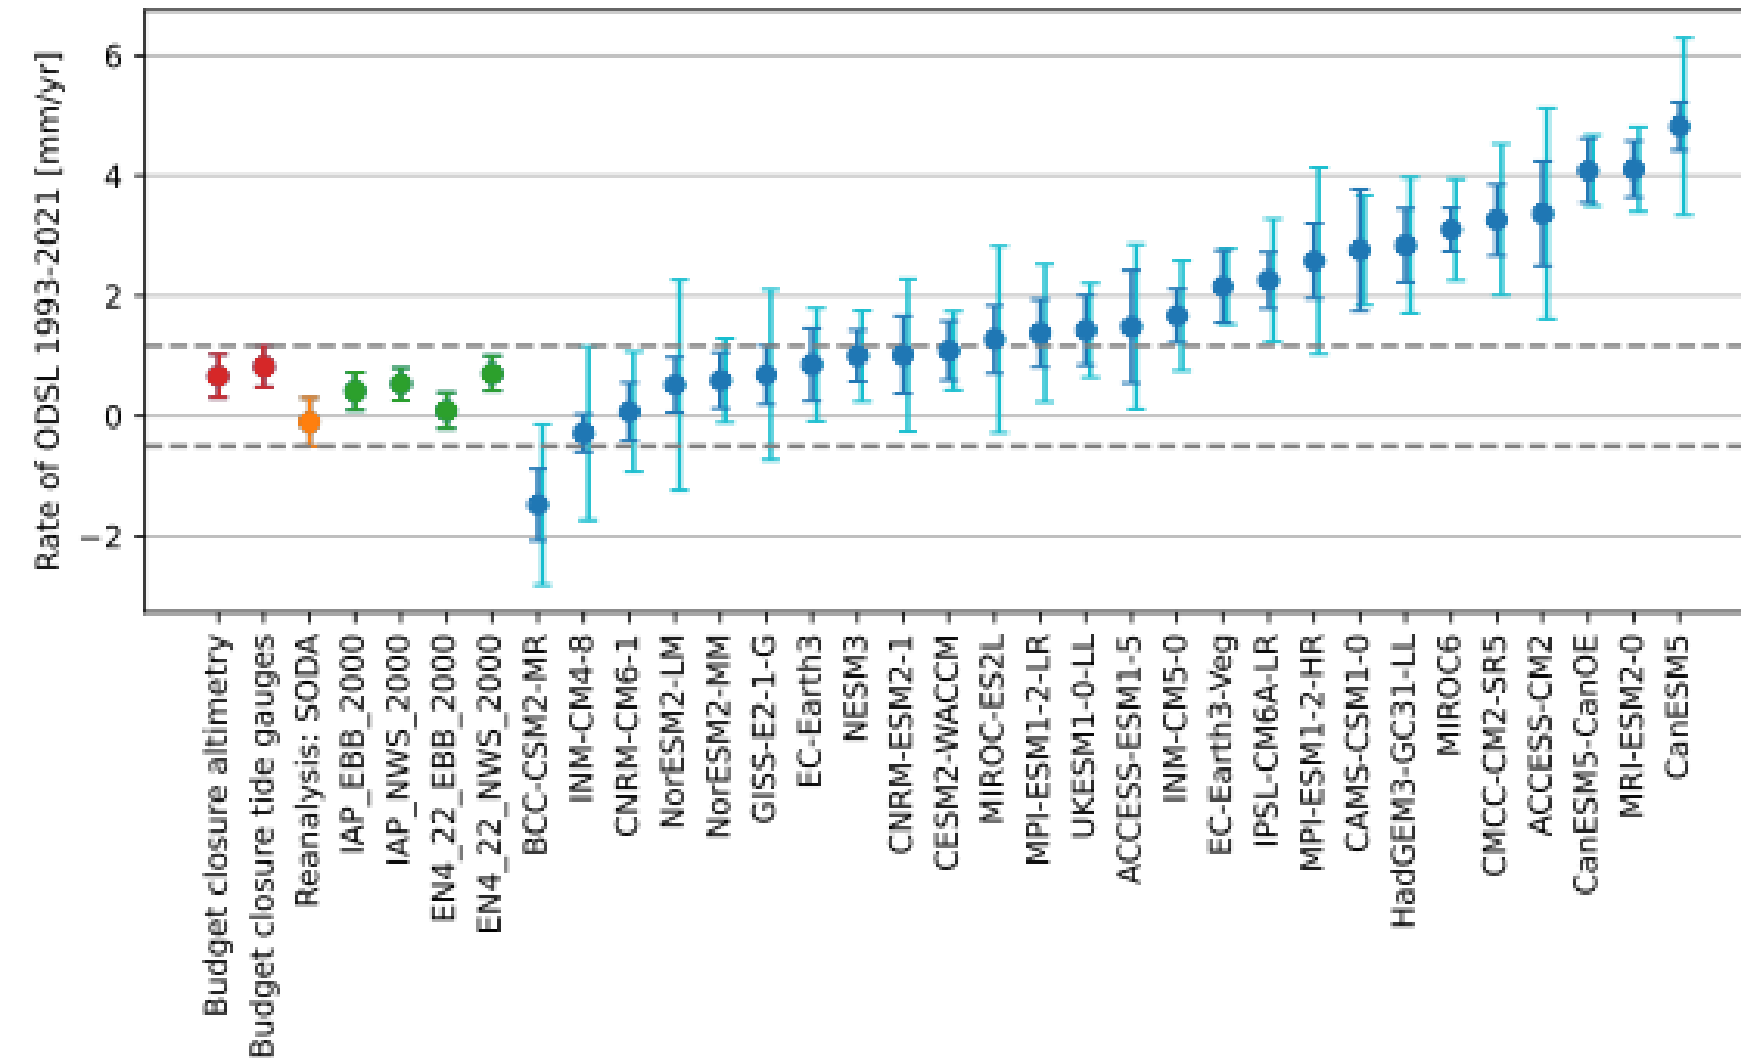

Sea level budget (1960-2024)

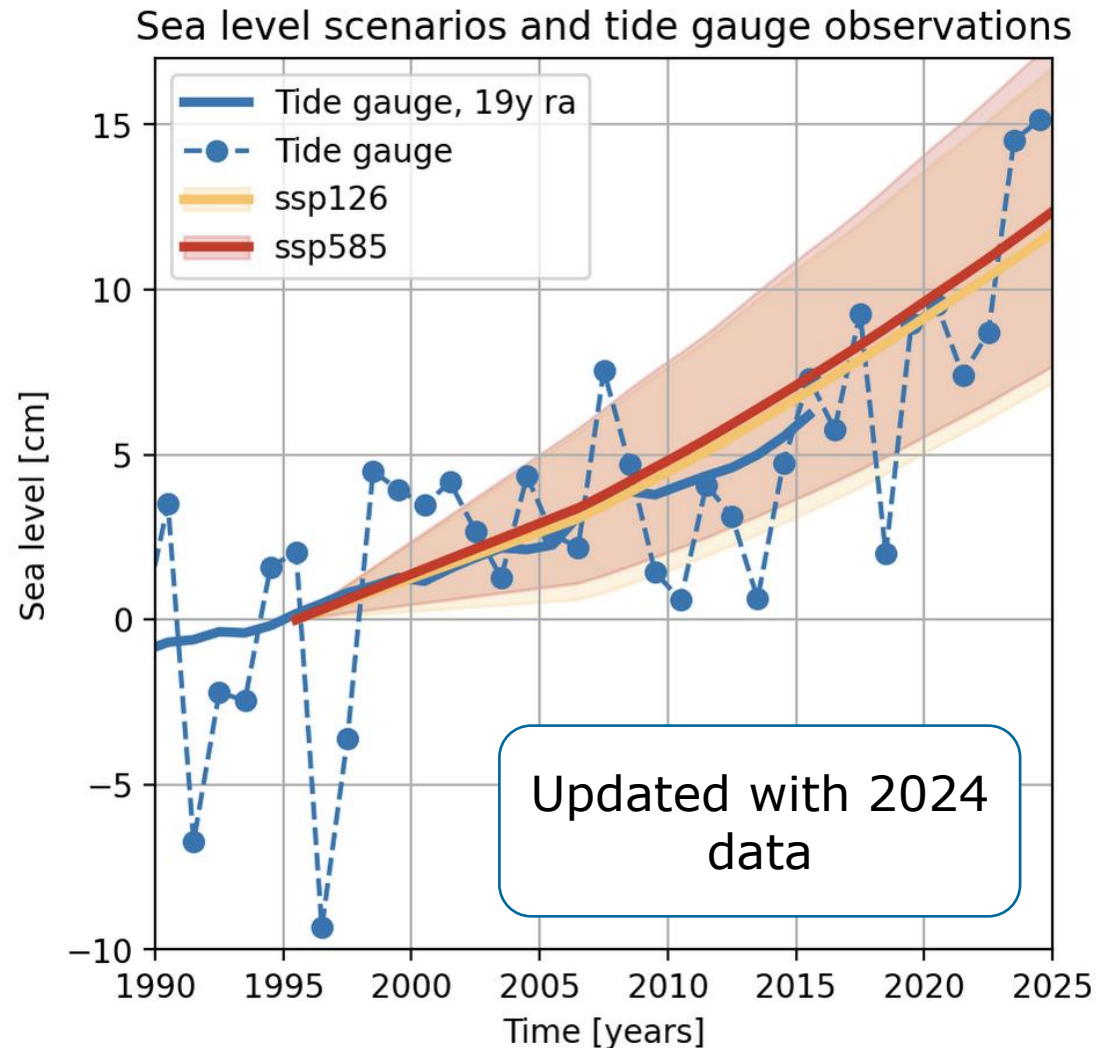

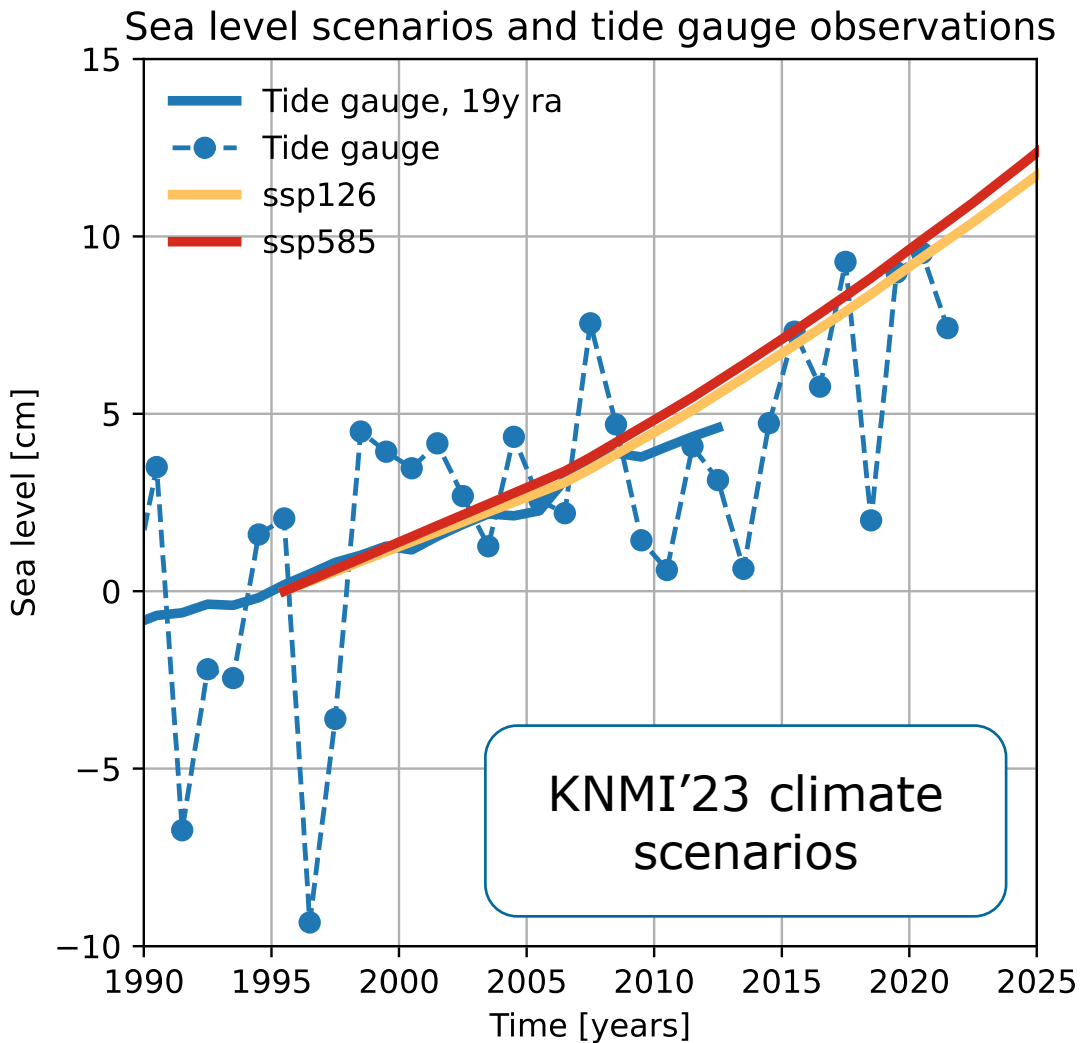

Model selection for Ocean Dynamic Sea Level

Le Bars et al.
(Ocean Science, 2025)

Comparing observations and scenarios

Conclusions

- › The budget shows that we understand the local drivers of sea level change since 1960
- › This understanding helps to evaluate climate models and improve scenarios
- › Steric sea level change is the main driver of past sea level rise and is also expected to dominate 21st century rise

KNMI'23 sea-level scenarios in 2100
